EDUCATION

University of Washington | 3.74 GPA
Bachelor's Degree, Computer Science

Seattle, WA

Sept. 2023 - Dec. 2025

- Relevant Coursework: Distributed System, Networks, Data Structure and Parallelism, Systems Programming

CERTIFICATIONS

- Solutions Architect Associate, Amazon Web Services

Mar. 2028

RELEVANT EXPERIENCE

Community Dreams Foundation
Software Engineer

Sebring, FL

Mar. 2026 - Present

- Designed and drafted a CRM deal pipeline supporting **10+** project managers, defining stages, transitions, and required data fields for sales tracking
- Implementing stage transitions and validation rules, enabling consistent deal progression and reducing manual tracking for users.

Tanaka : <https://tanaka.co.id/>
Software Engineer Intern

Jakarta, Indonesia

Jul. 2023 – Sept. 2023

- Developed front-end interfaces using HTML, CSS, and JavaScript to display real-time product availability and user data for coworkers' efficient search, improving coworkers' **time efficiency by 7%**.
- Improved **query efficiency by 25%** by integrating a MySQL-backed relational database with PHP in an MVC architecture, consolidating access into a single source of truth.
- Achieved **100% accuracy** in financial reporting by debugging and fixing SQL and logic errors, eliminating recurring miscalculations that previously affected 50+ monthly reports.

UW Algorithmic Trading Club : <https://huskyholdem.atcuw.org/>
Fullstack Developer

Seattle, WA

Jun. 2025 - Aug. 2025

- Contributed to UW's poker bot competition that is hosted for **50+ users**, by developing core APIs for automated bot match simulation.
- Designed and implemented the core API for UW's poker bot competition to automate 6-player matches in Dockerized environments, resulting in a **70% reduction in setup time**.
- Implemented a full-stack scaling API with frontend and backend support that allowed administrators to manually increase game instances during heavy load, **improving system uptime by 80%** and ensuring stable simulations during peak testing.

Paul G. Allen School, University of Washington
Interaction Programming (Flutter) Teaching Assistant

Seattle, WA

Mar. 2025 - Jun. 2025

- Explained core programming and application behavior concepts to **30+ students** weekly, including those without prior technical background, translating technical ideas into clear, actionable guidance.
- Addressed and resolved **50+ technical issues** related to application logic, development environments, and tooling by diagnosing errors, identifying root causes, and guiding students through fixes.
- **Worked closely with instructors and fellow teaching assistants** to support course delivery, lead weekly sections, and assist with grading and evaluation for courses serving over 80 students.

PROJECTS

Friendly : <https://github.com/jeremykamber/friend-ly/tree/develop>

Sept. 2024 – June. 2025

- Designed and implemented a scalable database schema using MySQL and deploying it to RDS, optimizing **data retrieval and storage efficiency by 20%** through well-structured indexing and API integration.
- Developed a MinHashing and Jaccard similarity-based system to model and analyze user similarity, improving **interest-based matching accuracy by 35%**.

Distributed System Key-Value Store

Sept. 2024 - Dec. 2024

- Developed a fault-tolerant, distributed key-value store in Java, ensuring strong consistency using the Multi-Paxos consensus algorithm, **withstand 67% node failures**.
- Enabled multi-key transactional support by integrating the 2-Phase Commit protocol while maintaining sequential consistency across operations.

SKILLS

- Python, Java, HTML, CSS, JavaScript, MySQL, RabbitMQ, Docker, AWS Services (RDS, DynamoDB, S3, CloudFront, EventBridge), Flutter (Dart), Node.js
