EDUCATION

University of Washington | 3.74 GPA
Bachelor's Degree, Computer Science

Seattle, WA
Sept. 2023 - Dec. 2025

CERTIFICATIONS

▪ Solutions Architect Associate, Amazon Web Services

Mar. 2028

RELEVANT EXPERIENCE

Community Dreams Foundation
Software Engineer

Remote, USA
Mar. 2026 - Present

- Reduced manual project and deal tracking for 10+ project managers by developing the first centralized full-stack CRM, organizing client data, deal workflows, and project tracking into a single system.
- Protected pipeline integrity across sales and project management workflows by designing enforced deal stages, validation controls, and automated Supabase workflow triggers using React and TypeScript.

UW Algorithmic Trading Club
Software Engineer

Seattle, WA
Jun. 2025 - Aug. 2025

- Automated competition environment setup for 90+ participants, reducing game initialization time from minutes to seconds through isolated Dockerized game and user environments.
- Guaranteed reliable execution of concurrent user requests across 800+ runs by implementing RabbitMQ-based asynchronous job queues and frontend polling systems.
- Improved responsiveness to users even during peak 20+ concurrent runs by developing full-stack container scaling systems without disrupting active matches.

Tanaka
Software Engineer Intern

Jakarta, Indonesia
Jul. 2023 – Sept. 2023

- Enabled real-time visibility into item pricing and availability for 20+ employees managing 50+ products by developing internal inventory and product tracking dashboards using HTML, CSS, and JavaScript.
- Improved warehouse inventory visibility and reduced low-stock incidents across warehouse operations by developing internal garage management systems for quantity updates, stock monitoring, and automated low-stock notifications with a PHP MVC architecture.
- Prevented major financial reporting inaccuracies across 50+ monthly reports by resolving recurring SQL and business logic issues in accounting workflows.

Paul G. Allen School, University of Washington
Interaction Programming (Flutter) Teaching Assistant

Seattle, WA
Mar. 2025 - Jun. 2025

- Explained core programming and application behavior concepts to 30+ students weekly, including those without prior technical background, translating technical ideas into clear, actionable guidance.
- Addressed and resolved 50+ technical issues related to application logic, development environments, and tooling by diagnosing errors, identifying root causes, and guiding students through fixes.

PROJECTS

Friendly

Sept. 2024 – June. 2025

- Improved scalability and efficiency of user data storage and retrieval by designing a MySQL database schema and deploying it to AWS RDS with optimized indexing and API integration.
- Improved interest-based user matching accuracy by developing MinHashing and Jaccard similarity systems to model and analyze user similarity relationships.

Distributed System Key-Value Store

Sept. 2024 - Dec. 2024

- Developed a fault-tolerant, distributed key-value store in Java, ensuring strong consistency using the Multi-Paxos consensus algorithm, withstand 67% node failures.
- Enabled multi-key transactional support by integrating the 2-Phase Commit protocol while maintaining sequential consistency across operations.

SKILLS

- Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, SQL, Dart
- Tools & Frameworks: AWS, React, Node.js, Flask, FastAPI, Flutter, Supabase, MySQL, PostgreSQL, RabbitMQ, Redis, Docker
